First Hello

Introducing Yourself and Others

A 15-minute interactive English lesson for A1–A2 learners

AUDIENCE	SETTING	MAIN OUTCOME
University English learners	Bangladeshi campus club fair	Greet · introduce · invite

The lesson at a glance: six stages

Learners arrive at a university club fair and help a new student, Nila, feel welcome. After a short warm-up and a phrase toolkit, the main activity is a fifteen-minute role-play in four timed rounds: greeting Nila, finding common ground, introducing their friend Rafi, and inviting Nila to join them. The lesson closes with an exit ticket.

Time	Lesson stage	What learners do / evidence
2 min	Stage 1 · Warm-up	Choose a welcoming opener at the club fair and explain why it works.
2 min	Stage 2 · Delivery	Notice the four moves and identify the phrase that introduces another person.
6 min	Stage 3 · Guided practice	Rounds 1–2 of the role-play: criteria, starters and a model line support each line.
9 min	Stage 4 · Main task	Rounds 3–4: introduce Rafi and invite Nila with less support.
1 min	Stage 5 · Review	Three quick decisions about the conversation, with a reason for each answer.
2 min	Stage 6 · Feedback	Role-play report plus exit-ticket score and next steps.

Learning outcomes

By the end of the lesson, learners can:

- Open a brief interaction with a context-appropriate greeting and introduce themselves.
- Add one personal or shared-context detail to help the other person respond.
- Introduce another person by name and relationship, then ask an open follow-up question.
- Choose language that is welcoming, respects people’s choices, and avoids assumptions.

Language learners practise

Open “Hi, I’m Tania.”

Connect “I’m studying business.”

Introduce “Nila, this is my friend Rafi.”

Invite “What are you interested in?”

How engagement and assessment work

- The main practice is a fifteen-minute role-play driven by a visible countdown timer and four timed rounds.
- Each round states three role-play criteria before the learner writes, so the target is visible, not a guessing game.
- Nila and Rafi answer each line in dialogue, so learners see the conversation respond to their choices.
- Every round is scored on its three criteria; missed criteria produce a specific fix rather than a grade alone.
- The closing role-play report shows 12 points of evidence, the learner’s own lines, and two next steps.
- The exit ticket adds two selected-response checks and a short written introduction as a second source of evidence.

Context, inclusion, and responsible technology

The setting is a university club fair, with familiar campus activities, student societies, a library study group, and a cultural evening as practice contexts. Learners may greet someone in Bangla before switching to English for practice; language choice should include people, not test their background. The lesson reminds learners to use a person’s stated name and pronouns, avoid assumptions, and give both people space to speak.

The assessment feedback is a small, rule-based teaching aid that runs in the browser. It is not a generative AI model or a substitute for teacher judgement. No learner response is uploaded or saved. Speech uses browser/device text-to-speech when available; text interaction remains usable without speech. The speaking voice depends on installed system voices.

How to run the lesson

Open index.html in a current browser, or run “node server.js” from the project folder and visit http://127.0.0.1:4173. Start the 15-minute timer when the class begins. “More practice” is an optional extension and is not included in the core 15-minute timing.

Suggested teacher introduction

“Today we’ll practise making a new person feel welcome. Imagine we are at a university club fair. You do not need perfect English: start with a greeting, share one small detail, introduce someone by name, and ask a question that gives the other person a choice to join in.”
